

Why a new landfill?

Auckland is still growing and will continue to grow. With this growth comes waste, from the people who choose to live in Auckland as well as the infrastructure needed to support them.

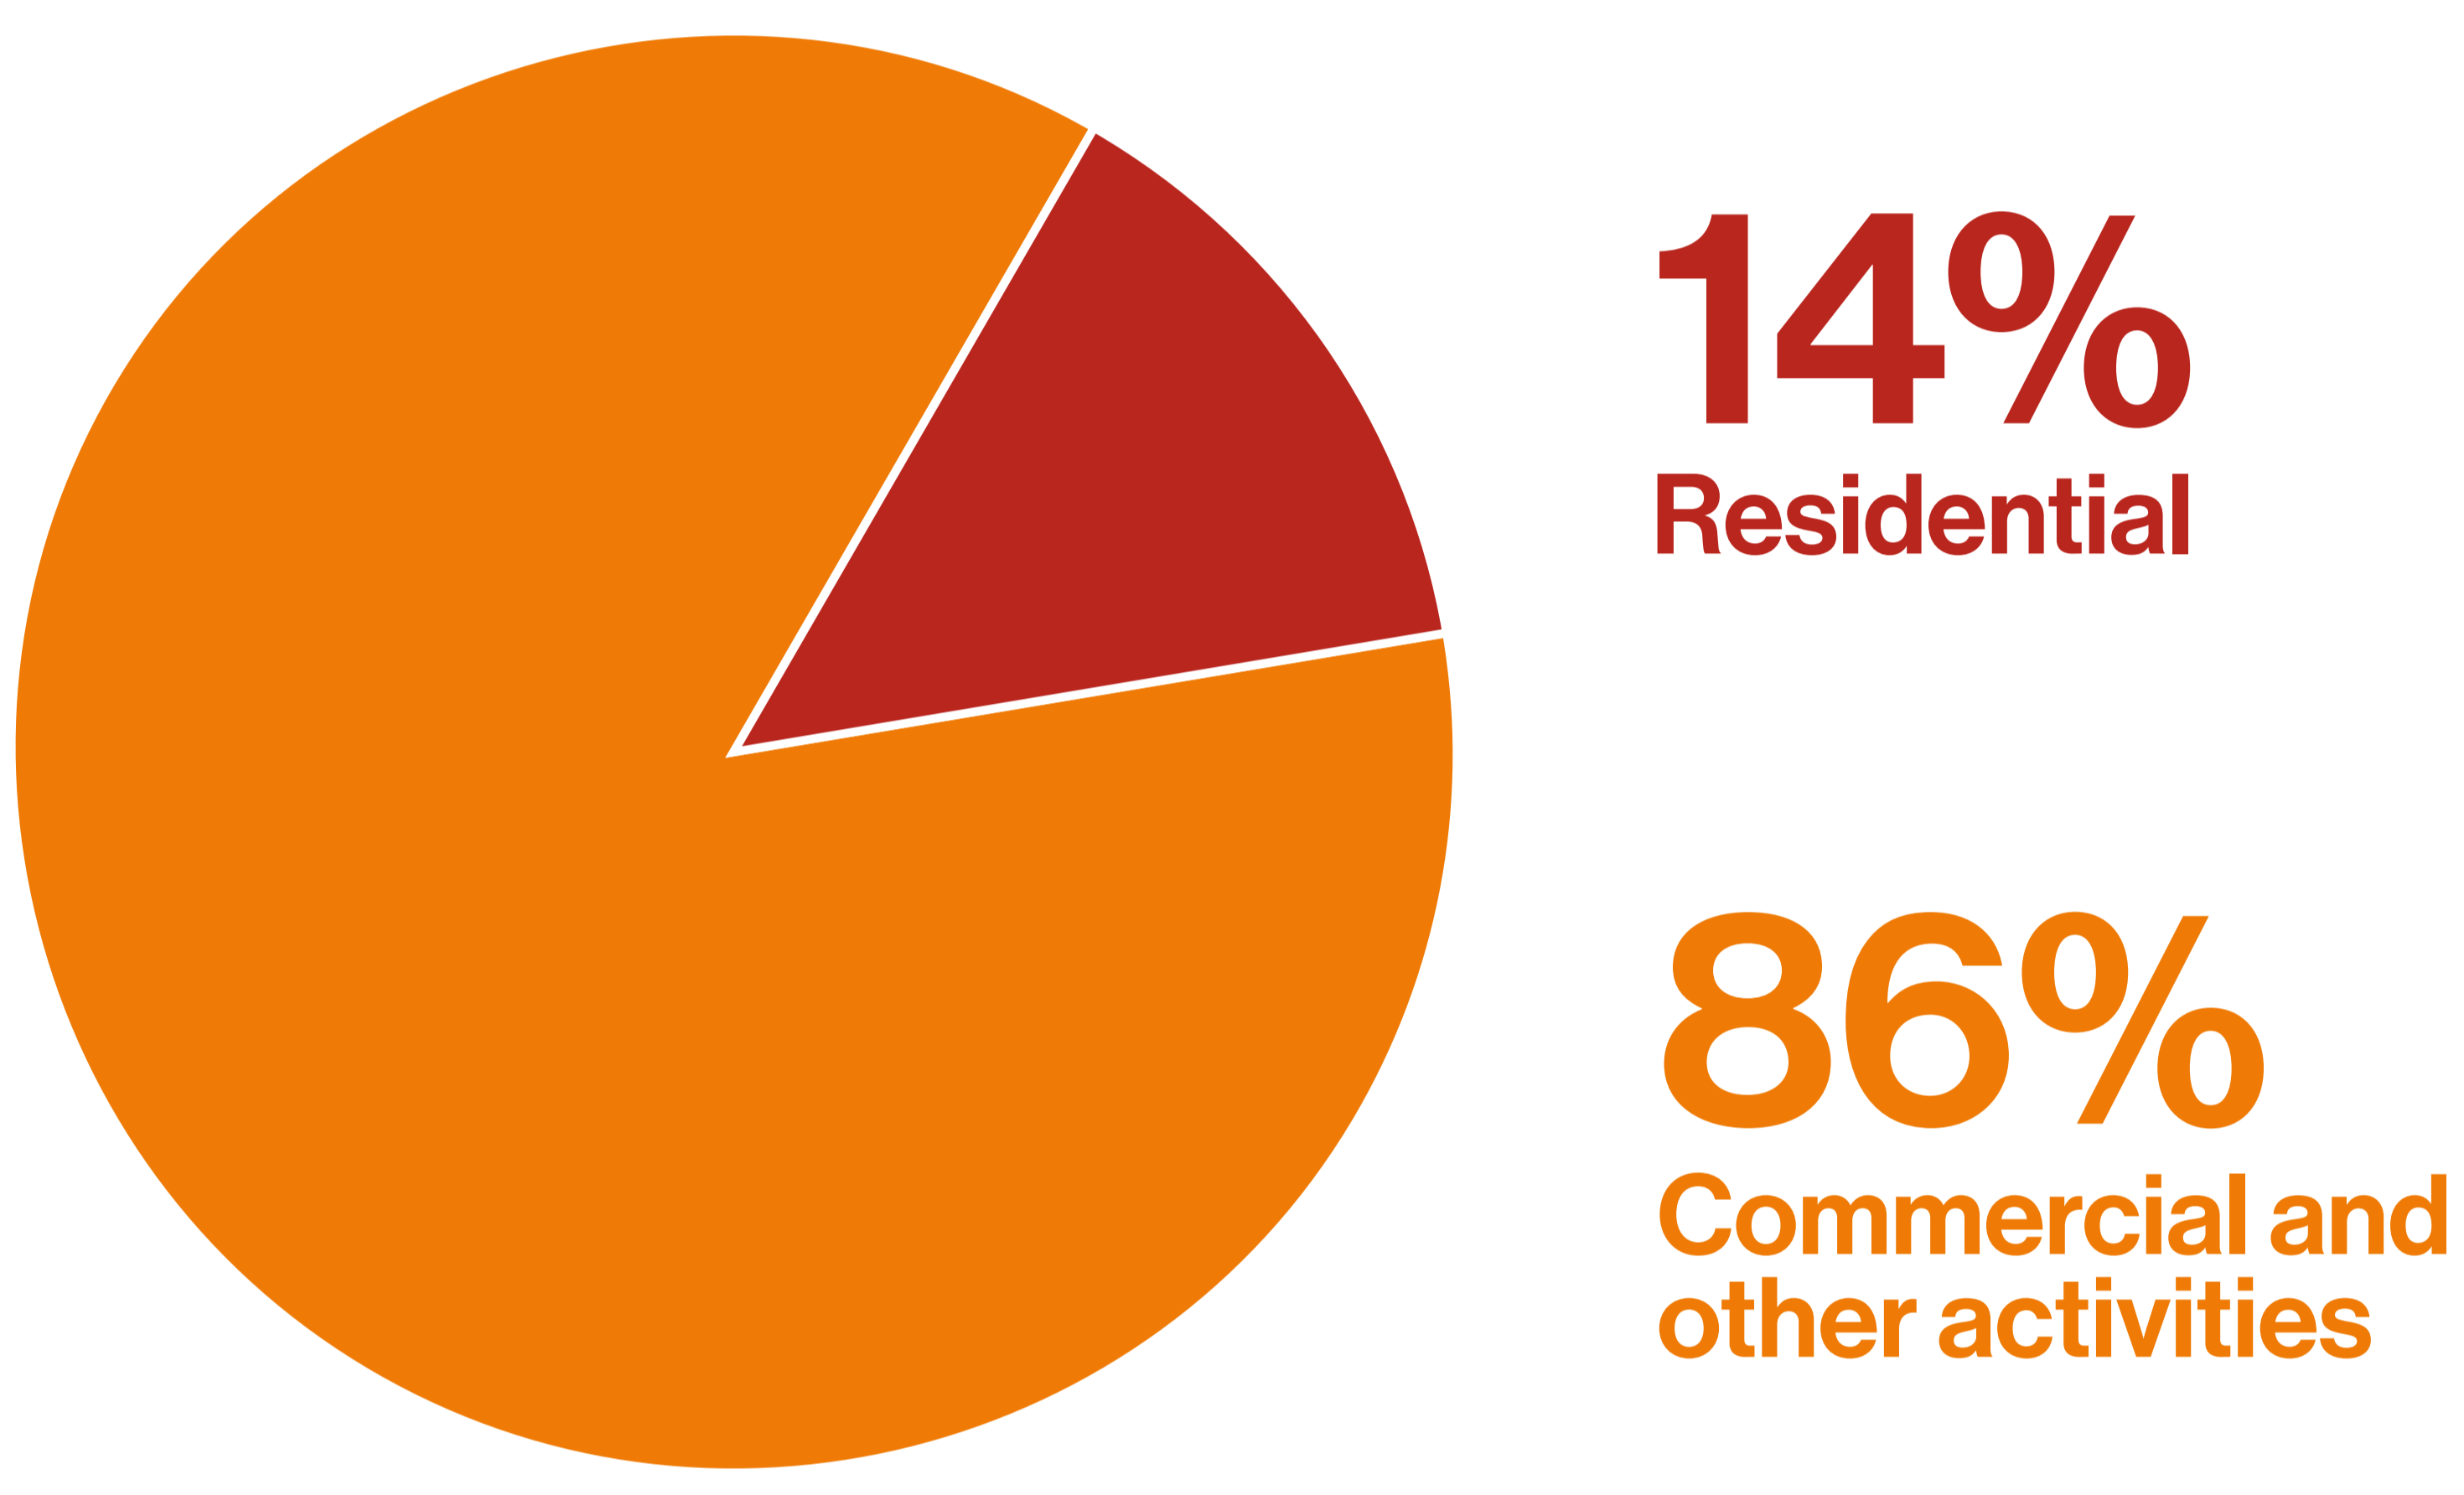

To manage this waste, Class 1 Municipal Solid Waste landfills are identified in the Auckland Unitary Plan as infrastructure of critical importance to the growth of the region.

Auckland currently has two modern, sustainable landfills in Whitford and Dairy Flat (Redvale).

Whitford is consented to receive waste until 2041, while Redvale is expected to stop receiving waste in 2028.

A new landfill will be needed once Redvale stops receiving waste. The proposed new Auckland Regional Landfill will replace Redvale.

Where Auckland waste comes from¹

The North West growth areas are expected to supply new neighbourhoods with:

Nearly **30,000** houses over the next 30 years²

Employment areas with more than **13,000** new jobs²
